- JPA / Hibernate / JDBC
- Apache Tomcat / Oracle GlassFish
- MySQL
- HTML / CSS / JavaScript / AJAX / JQuery
- JSP / JSF
- Maven
- Junit, Mockito
- IntelijIdea / NetBeans

About me

At the university, I was developing desktop application for adding and searching clients in the database using C++. Also I was developing program for microcontrollers using Assembler and C.

I have been learning Java since August 2017. At the moment, I make any test projects for myself, such as web page for output and adding comments on site and feedback's page for user interaction using JavaMail API. Also I have any ideas for my new projects, that I want to develop in near future.

I set myself a goal to create a software considering user's requirements, creating application with useable interface. I am constantly trying to learn new technologies and trying to improve my skills in this direction. I have good analytical skills. I am a quick study person and I work well in a team.
